

Incident Data Set

Version 6

- You should be viewing this with Adobe Acrobat version 6. The import and export functions are not fully operational when the Incident Data Set is used within a web browser.
- Save the Incident Data Set from the browser as a pdf, then open separately in Acrobat 6.
- Because the data contained in this document will be imported into numerous permits at the onset of an incident, it is imperative that the Incident Commander, Situations Section Chief, or other appointed member of the Incident Command System complete this Data Set as soon as possible.
